One processing relationship. The right POS for every concept.

Feenix Payments processes on Fiserv and is built to sit behind the point of sale a restaurant already uses, or the one that fits it best. We do not own a gateway, so we are never pushing a stack. We connect through any Fiserv-certified platform and support the POS brands below with first-hand experience in each.

This guide covers our preferred POS platforms for the three restaurant segments we serve most: quick service, full service, and bars and nightlife. Each entry includes a short overview of the system and where it fits best, so account executives and referral partners can match an operator to the right solution quickly. Several platforms fit more than one segment and are listed under each.

Quick Service (QSR)
Counter service, fast casual, coffee, drive-thru, ghost kitchens. Speed at the counter and simple menus matter most.

Full Service (FSR)
Table service, casual to fine dining, hotel restaurants, multi-unit groups. Tableside ordering, floor management and kitchen flow matter most.

Bar and Nightlife
Bars, lounges, clubs, music venues. Open tabs, pre-authorization and high-volume throughput matter most.

QUICK SERVICE

Preferred platforms for counter-service and fast-casual concepts.

Clover POS

FISERV-NATIVE ALL-IN-ONE POS

Clover is Fiserv's own point-of-sale family, so it runs natively on the Feenix processing platform with no third-party gateway in the middle. Hardware ranges from the countertop Station to the handheld Flex, with a large app market for online ordering, loyalty, scheduling and inventory. Setup is fast and the interface is easy for high-turnover staff to learn.

Good fit: counter-service concepts, coffee and dessert shops, fast casual, food halls and single-location operators that want hardware, software and processing from one relationship. Also a strong choice for smaller full-service rooms.

Native to Fiserv | Handheld + counter | App market | Kiosk mode

Quantic POS

CLOUD POS FOR RESTAURANTS

Quantic is a cloud-based system that covers restaurant, retail and hybrid concepts on one platform. It includes self-order kiosks, online ordering, inventory, employee management and multi-location reporting out of the box, and it works across iOS, Android and Windows hardware so operators are not locked into a single device.

Good fit: QSR and fast-casual groups with multiple locations, concepts that pair food with retail (markets, cafes with merchandise, convenience), and operators who want kiosks and online ordering without bolting on extra vendors.

Multi-location | Self-order kiosk | Retail + restaurant | Device flexible

FULL SERVICE

Preferred platforms for table service, from independents to enterprise groups and hotel F&B.

Tabit POS

MOBILE-FIRST FULL-SERVICE POS

Tabit is built around handheld ordering and pay-at-the-table, with the dining room workflow designed for servers who never leave the floor. It includes reservations, waitlist, online ordering, kitchen display and guest-facing payment, all in one platform with strong reporting across locations.

Good fit: busy full-service rooms where turning tables faster matters, upscale casual and fine dining groups, and operators replacing a legacy system who want a modern, server-centric experience.

Handheld ordering | Pay at table | Reservations built in

Quantic POS

CLOUD POS FOR RESTAURANTS

The same cloud platform listed under quick service carries a full table-service mode: floor plans, course firing, split checks, tableside ordering and kitchen display, plus the inventory and multi-location reporting operators get on the QSR side.

Good fit: groups that run both counter-service and table-service concepts and want one system across the portfolio, and independents that want a full feature set at a lower total cost than legacy enterprise POS.

One platform, both segments | Floor plans + coursing

TouchBistro POS

IPAD POS BUILT FOR RESTAURANTS

TouchBistro is a restaurant-only iPad system known for an intuitive floor plan, tableside ordering, menu management and a growing suite of add-ons for reservations, online ordering, loyalty and gift cards. It is one of the quickest systems for an independent operator to deploy and train on.

Good fit: independent full-service restaurants, cafes and bistros, and small groups of two to ten locations that want a polished, restaurant-specific product without enterprise complexity.

iPad based | Independents | Fast deployment

NCR Aloha

ENTERPRISE RESTAURANT POS

Aloha is one of the most widely deployed restaurant systems in the country and the standard for many franchise brands and multi-unit groups. It offers deep kitchen and labor management, above-store reporting, drive-thru and online ordering, and a broad ecosystem of certified integrations.

Good fit: multi-unit and franchise groups, casual dining brands with standardized operations, and any operator already running Aloha who wants to keep the POS and improve the processing relationship.

Multi-unit / franchise | Enterprise reporting | Large integration ecosystem

FULL SERVICE (CONTINUED)

Enterprise hospitality and Fiserv-native options for table service.

Oracle MICROS Simphony

ENTERPRISE HOSPITALITY POS

MICROS is the dominant system in hotels, resorts, casinos and large venues, and integrates directly with Oracle OPERA property management for room charges and folio posting. Simphony is the cloud-based generation of the platform, with centralized menu and labor control across properties and outlets.

Good fit: hotel restaurants and bars, resort F&B, stadiums and arenas, and hospitality groups with many outlets under one roof. A natural match for the hotel and lodging portfolio Feenix already serves.

Hotels and resorts | OPERA PMS integration | Multi-outlet

Clover POS ALSO FITS FULL SERVICE

Clover Dining adds floor plans, table management, coursing and tableside ordering on the Flex handheld, still running natively on the Feenix processing platform. **Good fit:** smaller full-service rooms and neighborhood restaurants that want a simple, affordable system with processing built in.

BAR AND NIGHTLIFE

Preferred platforms built around open tabs, speed at the rail and card pre-authorization.

SmartTab

BAR AND NIGHTLIFE POS

SmartTab is designed for the bar workflow first: one tap to open a tab on a pre-authorized card, fast repeat orders at the rail, and automatic tab close-out so cards are never left behind. Pre-authorization reduces walkouts and chargebacks, and the interface is built for speed under volume.

Good fit: high-volume bars, lounges and nightclubs, sports bars, and venues where walkouts and unclosed tabs are a real cost line.

Pre-auth tabs | Walkout protection | High volume

Union POS

GUEST-LED BAR POS

Union combines a bartender-focused POS with guest-facing ordering: patrons open a tab from their phone, order and pay without flagging down staff, while bartenders see everything in one queue. Union reports higher throughput and higher checks in busy rooms, with venue-level data on guests and spend.

Good fit: packed bars, music venues, breweries and nightlife concepts where the bottleneck is the line at the bar, and operators who want guest data they can market to.

Guest mobile ordering | Open tab from phone | Venue data

Running something not on this list?

Feenix connects through any gateway certified on Fiserv, including Authorize.net, NMI, accept.blue, FreedomPay and Fusebox. Send us the POS and we will confirm the path.
